COVER LETTER

Since 2014, I've had professional industry experience as a Front End Developer/Designer, designing websites and marketing multimedia through the Adobe Creative Suite, primarily with Illustrator, Photoshop and InDesign. Additionally, I've been busy building websites in JavaScript/HTML5, CSS3 and PHP7. Previously I have done Web and Mobile Designs part-time tertiary studies at SAE Qantm, which is one of the leading Web Universities in the world.

Currently I am heading a small team at Zift Solutions where I have been producing high-end marketing Websites and EDMs for some of the largest tech companies in the world, including custom designed websites which have proved hugely popular for our clients. I also have improved workflows and introduced new procedures that have further increased efficiencies and running costs within the business.

My goals are to gain further experience with a talented and professional team and to advance my skills to eventually add Senior to my Web Developer/Designer title.

During 2016/2017, I worked with ThinkZion as a part-time Web Developer/Designer where I have been building high profile industry websites such as for the new Kosrae Nautilus Resort site which made international headlines throughout much of 2016. I also lead customer relations for the company while also completing two internships.

I began my career in a precision engineering firm called Broens industries originally as a CNC Programmer and Engineering Designer, but quickly evolved to lead the Web Design and IT Department from 2014, where I found my passion in web development and design with hands-on practicality of marketing the company's brand.

It would be great to hear from you and to discuss how I could become an asset to your business.

Best Regards,
Todd Sutherland
